

4-1 Classifying Triangles

Parts of a Triangle:

Classify Triangles by angles:

Acute Triangle: all angles are _____ (_____)

Equiangular: all three angles are _____ (_____)

Obtuse Triangle: One angle is _____ (_____)

Right Triangle: One angle is _____ (_____)

Classify Triangles by Sides:

Scalene Triangle: _____ sides are _____ (_____ \cong sides)

Isosceles Triangle: _____ sides are _____ (_____ \cong sides)

Equilateral Triangle: _____ are _____ (_____ \cong sides)

Classify each triangle as *acute*, *equiangular*, *obtuse*, or *right*.

Classify each triangle as *equilateral*, *isosceles*, or *scalene*.

Find the measure of each side of equilateral $\triangle RST$ with $RS = 2x + 2$, $ST = 3x$, and $TR = 5x - 4$.

Find the measure of each side of $\triangle ABC$ with vertices $A(-1, 5)$, $B(6, 1)$, and $C(2, -6)$. Classify the triangle.

4-1 Classifying Triangles

Parts of a Triangle:

Sides

Vertices

Angles

Classify Triangles by angles:

Acute Triangle: all angles are acute ($<90^\circ$)

Equiangular: all three angles are congruent ($=60^\circ$)

Obtuse

Triangle: One angle is obtuse (>90)

Right Triangle:

One angle is right ($=90$)

Classify Triangles by Sides:

Scalene Triangle: No
two sides are
congruent (0 sides \cong)

Isosceles Triangle: at least
two sides are congruent
(at least 2 \cong sides)

Equilateral Triangle: All
three sides are
congruent
(3 sides \cong)

Classify each triangle as *acute*, *equiangular*, *obtuse*, or *right*.

Classify each triangle as *equilateral*, *isosceles*, or *scalene*.

Find the measure of each side of equilateral $\square RST$ with $RS = 2x + 2$, $ST = 3x$, and $TR = 5x - 4$.

Find the measure of each side of $\triangle ABC$ with vertices $A(-1, 5)$, $B(6, 1)$, and $C(2, -6)$. Classify the triangle.
